Binary summaries count observations coded 1. Missing: n (%) of country-years in each column; binary percentages exclude missing values.

Exposure: armed conflict in the previous year (lagged by one year). All available country-years from 2000–2019 are pooled. Countries may contribute to both exposure groups.

GDP: current US dollars, expressed in thousands. OECD: Organisation for Economic Co-operation and Development membership.

High-density areas: percentage of the population living at >1,000 people/km². Urban residence: percentage living in urban areas. Age dependency: people aged <15 or >64 per 100 people aged 15–64.

Male education: age-standardised years of education per capita. Temperature and rainfall: population-weighted annual means; rainfall is expressed in thousands of millimetres per year. Earthquake and drought: 1 = present, 0 = absent.
